End-to-End Security Summary			
Original Sender	Original Recipient	Overall Encryption Status	Status Description
mjames@newinsurance.com	wanda.mcgrath@holdingsusa.net	★★★★	Best encryption from sender device, best to recipient gateway
mjames@newinsurance.com	jonathan.ogden@holdingsusa.net	★★★★	Best encryption from sender device, acceptable to recipient.
mjames@newinsurance.com	richard.clark@associatesolutions.net	★★★★★	Best encryption from sender device, best+ to recipient.

For more information about RMail® services, visit www.rmail.com. An RPost® Technology

If an email is identified as being eavesdropped on, the Registered Encryption™ report identifies the most likely security gaps; **and/or provides audit-ready proof that the security gap must have been after the recipient forwarded the message onward - and not a fault of the sender.**

The security forensics provided by Frama RMail are incontrovertible, and allow IT admins to easily justify and demonstrate their findings about where cybercriminals may have accessed an email in the path from sender to recipient, even if the breach occurred at the recipient's end.
