

The Booster for your Signing Processes

Frama RSign. Your e-signature service.

Your e-signature service

Improve your workflows with Frama RSign. E-Signatures made simple and secure. RSign has been developed to help you simplify and digitise your document workflows.

Easy to Sign

Frama RSign's signing process is Child's play. The provided checklist guides the signer through the process, step by step, field by field. This reduces mistakes and incomplete documents, optimises the signers experience and saves you administrative costs.

- Guided signing via checklist
- Signatures with three styles: typed, handwritten or uploaded signatures
- Document workflow with automatic reminders
- Digital signatures for document integrity (sealing)

Configure and Manage

Frama RSign offers you the highest flexibility in your processes and workflows around the electronic signature due to its multitude of options and settings. Receive latest information about your documents via the built-in dashboard or the „Manage“ tab, where all documents are monitored.

- Rights management
- Roles and authorisations
- Release management

Create and re-use Templates

Create templates for your frequently used documents. Add roles, terms and conditions, cover texts, document fields and much more to create a document dedicated workflow. Templates can be used again and again.

- Templates with associated workflows
- Document settings, roles and timeframes
- Shared templates with teams or individuals
- Team or person only templates
- Formats: Word / Excel / Powerpoint / png / PDF

Document Management

Use the integrated tracking and reporting feature of RSign to stay ahead. Know exactly what is happening with your documents. Be aware when documents time out. Receive real-time information when signers sign or refuse to sign.

- Document tracking
- Signature protocols
- Team and user settings / rights management

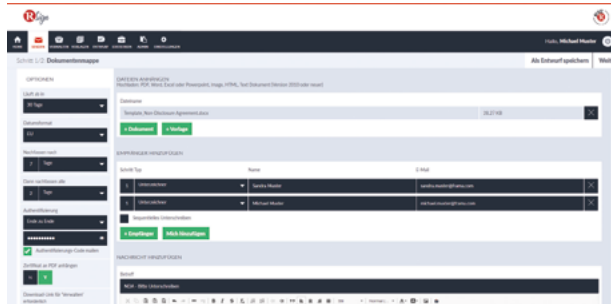

API and Automation

Each feature and element of your documents can be fully automated with RSign's APIs giving you an all-in-one solution for your workflow requirements.

Frama RSign combines simplicity, security and user experience in a unique way to help you to master your digital business!

Workflow Management

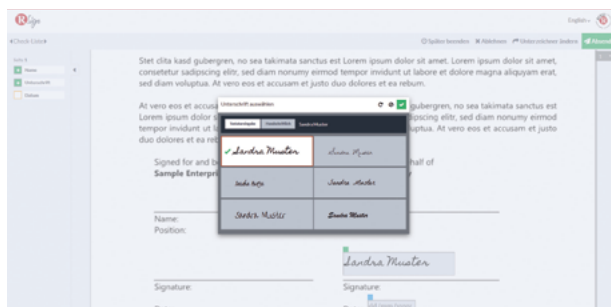

Prepare your document in your browser

Design your Workflow

With clear focus on simplicity, Frama RSign lets you prepare and send documents for electronic signature within seconds. The management view provides real time access to all statistics and provides in-views about your documents during signature process.

- Prepare documents with drag & drop
- Use templates
- Protect personal or confidential information via passwords and encryption
- Obtain multi-party signatures
- Define signature sequence
- More options available

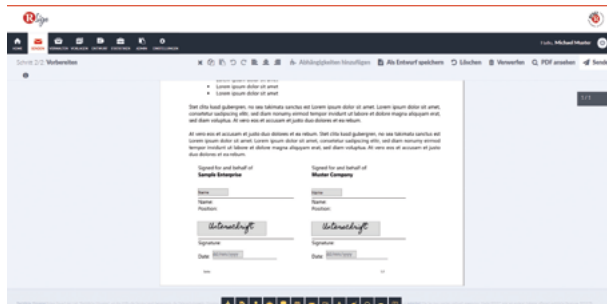

Sign documents without any hurdles online

Setup & Management

Configure Frama RSign according to your needs and requirements. Manage and monitor all settings and workflows by your in-house specialists.

- Setup and configuration
- Integration into existing processes and applications
- Rights management
- Roles and authorisations
- Release management
- Online portal for user administration

Document preparation with **Drag & Drop**

Advanced Functionality

With Framasign, you can benefit from advanced functionality. **Templates** let you combine documents with pre-defined workflows for frequent use. **Rules** provide even more flexibility as you can assign a specific workflow (the rule) to any document. Perfect for CRM systems with dynamic document output!

Form Field Tags allow you to embed tags in your documents during the creation process. It doesn't matter, whether the documents have 2, 5 or even 10 pages. Signable fields flow with the length of the text and stay in context!

Static Links can be used to offer signable documents via web-sites. Signers may attach pictures etc. Ideal for insurances or similar business!

Send and manage documents and signatures

Meet Standards

All you need: Auditable proof of the whole e-sign process. Framasign complies with GDPR, eIDAS for advanced electronic signatures and other international regulatory standards and data protection acts.

Specifications
