

Smart Encryption

Transmission Preferred Encryption:

Frama RMail's default settings first attempt transmission level encryption at the minimum sender-acceptable security level, and deliver the encrypted email right to the recipient's inbox, providing the same familiar user experience as a normal email: without any logins, links or need to create an account. Recipients even have the option to reply encrypted.

IT admins can enforce the minimum TLS level for the entire organisation.

REGISTERED EMAIL™ | ENCRYPTED TRANSMISSION

You have received an encrypted email from **David Sanders**. click here to reply to this message encrypted.

Benefits:

- The banner adds confidence for the receiver that the information was shared securely
- Familiar user experience
- No logins, links or need to create an account

click here to reply to this message encrypted.

Benefits:

- Recipient can reply encrypted
- Option to attach up to 1GB of files securely in the reply at no additional cost

Smart Encryption

Message Level Encryption:

Frama RMail dynamic encryption engine detects whether the recipient's server is able to receive the email at the minimum sender-acceptable security level and, if not, automatically reverts to message level encryption, wrapping the email and any attachments inside an AES-256-bit encrypted PDF package, delivered into the recipient's inbox, with automated decryption password management.
